Fraud Intelligence

1. Suspicious Contract Value Detection

TITLE

Detection of Unusually High Contract Values

WHAT I DID

Identified vendors with contract values significantly higher than expected thresholds within the dataset.

```
-- 1. SUSPICIOUS CONTRACT VALUES
-- Finding vendors with unusually high contract values for their category.
SELECT Vendor_name, Category, Contract_value
FROM tprm_vendors
WHERE Contract_value > 900000;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

Vendor_name	Category	Contract_value
Midel	Financial	1708563.00
LiveZ	Financial	1384392.00
Muxo	IT Services	1994249.00
Fivechat	Legal.	1164376.00
Edgeblab	IT Services	1107612.00
Kwinu	Logistics	1168143.00
Wordtune	Cloud Provider	1559282.00
Dabjam	Cloud Provider	1003763.00
Skinte	Legal.	1823346.00
Oloo	Logistics	1436337.00
Browseblab	Cloud Provider	1398164.00
Brainsphere	IT Services	1679950.00
Zazio	Financial	1382592.00
Livetube	Legal.	1255621.00

INSIGHT

This highlights potential overbilling or inflated contract agreements, which may indicate procurement fraud or misclassification of vendor categories.

2. Ghost Vendor Country Check

TITLE

Detection of Missing or High-Risk Vendor Locations

WHAT I DID

Identified vendors with missing or undefined country information, which increases traceability risk.

Fraud Intelligence

```sql
-- 2. "GHOST VENDOR" COUNTRY CHECK
-- Identifying vendors from "High Risk" locations or missing countries.
SELECT Vendor_name, Country, Risk_status
FROM tprm_vendors
WHERE Country IS NULL OR Country = '';
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

Vendor_name	Country	Risk_status

INSIGHT

Missing country data reduces vendor transparency and may indicate incomplete onboarding or vendor masking risks.

3. Onboarding Anomalies Detection

TITLE

Vendor Onboarding Spike Detection

WHAT I DID

Analyzed onboarding dates to detect abnormal spikes in vendor registrations.

```sql
-- 3. ONBOARDING ANOMALIES
-- Checking for multiple vendors onboarded on the exact same date.
SELECT Onboarding_date, COUNT(*) as vendors_created
FROM tprm_vendors
GROUP BY Onboarding_date
HAVING vendors_created > 5;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

Onboarding_date	vendors_created
1/2/2023	6

INSIGHT

Fraud Intelligence

Multiple vendors being onboarded on the same date may indicate bulk or automated registrations that require further validation.

4. Risk vs Incident Mismatch

TITLE

Risk Classification Inconsistency Analysis

WHAT I DID

Detected vendors l

```
22    -- 4. RISK VS. INCIDENT MISMATCH
23    -- Finding vendors marked as "Low Risk" but having a high number of incidents.
24    SELECT Vendor_name, Risk_status, Incident_count
25    FROM tprm_vendors
26    WHERE Risk_status = 'Low' AND Incident_count > 5;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

Vendor_name	Risk_status	Incident_count

abeled as low risk but with high incident counts.

INSIGHT

This mismatch suggests inaccurate risk classification models or delayed risk reassessment, exposing the organization to hidden threats.

5. Round Number Invoice Pattern Detection

TITLE

Suspicious Round-Value Contract Detection

WHAT I DID

Identified vendors submitting contract values in clean round numbers, which can indicate invoice manipulation patterns.

Fraud Intelligence

```sql
-- 5. Fraudsters often submit fake invoices in round numbers
SELECT Vendor_name, Contract_value
FROM tprm_vendors
WHERE Contract_value % 100 = 0
AND Contract_value > 1000;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:

Vendor_name	Contract_value
Mymm	289600.00
Linktype	1168500.00
Realbridge	1144600.00
Realcube	1882500.00
Fivespan	596600.00
Aimbu	1801700.00
Skipstorm	389300.00
Buzzdog	1499600.00
Yakidoo	1211500.00

INSIGHT

Frequent round-number transactions may indicate fabricated invoices or simplified estimations, which are common in fraudulent billing schemes.
